

# Devicetree BOF

ELC 2018  
Portland, Oregon

Frank Rowand, Sony

March 14, 2018  
180306\_2014

# My Goal

Do NOT show all of the slides

# Agenda

- Past events
- Future events
- New since elc 2017
- Tools status
- questions, comments, issues, concerns from the crowd
- commit statistics

# Plumbers 2017 Summary

September 2017

Los Angeles

Was not scheduled -- not enough interest / commitment

# Devicetree Workshop Oct 2017

Prague, Czech Republic

[https://elinux.org/Device\\_tree\\_future](https://elinux.org/Device_tree_future)  
#Kernel\_Summit\_2017.2C\_Devicetree\_Workshop

- slides
- notes

=== Validation Tools & Schema

=== Runtime usage

=== DTS maintenance issues

=== More stuff

# Devicetree Workshop Oct 2017

Prague, Czech Republic

# Devicetree Workshop 2017

- 9:30 Welcome and Schedule bashing
- 9:40 Encoding and Schema checking: Framing the problem
- 9:45 DT YAML encoding overview
- 10:00 YAML encoding discussion
- 10:20 DT Schema format - option 1
- 10:35 DT Schema format - option 2
- 10:50 DT Schema discussion - what should go in the spec?
- 11:50 Code Generation from DT
- 12:10 Runtime memory consumption
- 14:30 Overlay maintenance plan
- 14:45 Avoiding duplicate descriptions
- 15:00 Criteria for accepting board files
- 15:15 Location for maintaining bindings - how to handle foreign bindings
- 15:30 Sharing Generic bindings
- 15:45 ABI Stability
- 16:00 [break and overflow discussion]
- 16:30 DT health check
- 16:50 devicetree.org update
- 17:05 EBBR Discussion
- 17:20 Closing and feedback

# Plumbers 2018

November 13 - 15, 2018

Tuesday - Thursday

Vancouver, British Columbia, Canada

colocated with the Linux Kernel Summit

Should there be a Devicetree track???

# Devicetree Specification

Devicetree Specification 0.1 **supersedes ePAPR for the Linux kernel, continues to evolve**

<https://www.devicetree.org/specifications/>

Mail list, Build Instructions, etc

<https://www.devicetree.org/collaborate/>

Repository

<https://github.com/devicetree-org/devicetree-specification>

# Tools

# Kernel Configuration Info -- OLD

## In tree

```
scripts/dtc/dt_to_config \
arch/arm/boot/dts/qcom-apq8074-dragonboard.dts \

# dtc - Devicetree Build Checks

commits from February 10, 2017 to date in dtc repo

add chosen node checks

add aliases node checks

check for #{size,address}-cells without child nodes

add string list check for \*-names properties

add string list check

add a string check for 'label' property

add interrupts property check

add gpio binding properties check

add phandle with arg property checks

Warn on node name unit-addresses with '0x' or leading 0s

Add bus checks for simple-bus buses

Add bus checks for PCI buses

Add Warning for stricter node name character checking

Add Warning for stricter property name character checking

# dtc - overlays - Linux v4.15

dtc creates the .dtb **OVERLAY INTERNAL DATA**  
(“metadata”)

**Do not hand code overlay internal data nodes  
in DTS source:**

```
fragment@  
__overlay__  
__fixup__  
__local_fixup__  
__symbols__
```

# Metadata

How should the metadata required by overlays be encoded in the FDT?

Discussion in progress on devicetree-compiler list

Subject: [RFC] devicetree: new FDT format version

Message-ID: <b96829f9-2e8b-fdc5-5090-58591e2260cf@gmail.com>

Date: Mon, 22 Jan 2018 00:09:18 -0800

# Metadata - base FDT overhead

Metadata overhead measured for arch/arm/boot/dts/\*

row	dtb no symbols	delta symbols	delta new fmt	bytes saved
----	-----	-----	-----	-----
99%	90531	42721	15766	26955
83%	44302	14582	5163	9419
66%	26277	11662	4628	7034
49%	21047	7328	2754	4574
33%	12864	4305	1705	2600
16%	12009	2929	1520	1409
0%	1220	68	149	-81

- “**delta symbols**” is added size from '**dtc -@**'
- “**new fmt**” is added size from '**dtc -@**' for first proposal in the thread

```

What if there is no label for the overlay target in the base devicetree?

What if the overlay target is the root node (dtc does not allow a label on the root node)?

Solutions are being discussed  
on the devicetree-compiler list

# .dtsi source vs overlay .dtsi

# v4.10.. top drivers/of/ commits

(February 19, 2017 ..)

What have patch topics been?

Very imprecise topic count (do not take the list too seriously...)

Based mostly on leading fields of patch subject

# v4.10.. top drivers/of/ commits

(loosely based by patch comment tag)

```
23 overlay
10 device property
12 test
  7 of_mdio
  7 irq
  6 fdt
  6 of_graph
  6 device
  5 pci
  4 platform
  3 base
```

THE END

Thank you for your participation...

# .dtsi source vs overlay .dtsi

With the new dtc --

Overlay .dts file contains directives:

```
/dts-v1/;
```

```
/plugin/;
```

.dtsi include file does not

# Use include as .dtsi or overlay

With sugar syntax, the syntax used by an overlay is now compatible with the syntax used by an include file, if the include file uses labels as paths instead of using explicit paths.

- This may be convenient for development workflows
- Do not become dependent on this for overlays that will be long lived -- current thinking is that we want many / most overlays to use the connector model

# Use include as .dtsi or overlay

## ----- base tree -----

```
$ expand fpga_tree.dts
/dts-v1/;

/* labels used by overlay are in the base tree */

/ {
    soc {
        intc: interrupt_ctrl {
        };
        fpga_region: base_fpga_region {
        };
    };
};

/include/ "fpga_plugin_or_dtsi.dts"
```

## ----- overlay -----

```
$ expand fpga_overlay.dts
/dts-v1/;
/plugin/;

/include/ "fpga_plugin_or_dtsi.dts"
```

# The .dtsi

```
$ expand fpga_plugin_or_dtsi.dts
&fpga_region {
    ranges = <0x00000000 0x00000000 0xc0000000 0x00040000>,
            <0x00000001 0x00000000 0xff200000 0x00001000>;

    external-fpga-config;

    #address-cells = <2>;
    #size-cells = <1>;

    fpga_pr_region0 {
        compatible = "fpga-region";
        fpga-bridges = <&freeze_controller_0>;
        ranges;
    };

    freeze_controller_0: freeze_controller@100000450 {
        compatible = "altr,freeze-bridge-controller";
        reg = <0x00000001 0x00000450 0x00000010>;
        interrupt-parent = <&intc>;
        interrupts = <0 21 4>;
    };
};
```

# Overlays -- more stuff...

# Overlays

- U-Boot overlay support
  - enhancements have been added

# Overlays - some use cases

- Expansion slots / external connectors
  - beaglebone
  - raspberry pi
  - minnowboard
  - C.H.I.P.
  - Arduino
  - seeedstudios Grove 4 pin connectors
  - others?
- FPGA

# Overlays - some use cases

- Combinatorial explosion of .dts / .dtb files

example:

Devicetree Hardware Autoconfiguration

(Not the only remaining issue.)

# Overlays, Linux kernel progress

(Not a complete list)

- overlay.c refactored
- resolver.c refactored
- hand coded overlays in devicetree source files
  - resolved by sugar syntax if base tree has required labels
  - continued dtc enhancements underway
- papered over issue: free FDT or expanded devicetree while pointers into them still exist
- unable to free overlay FDT and overlay expanded device tree after overlay removal (memory leak)
- FDT format update up in the air
- of locking architecturally broken
- pre-removal checks needs to ensure relevent driver(s) unbind
- connectors architecture up in the air
- overlay semantics not fully specified
- overlay manager (do not accept until gating requirements are resolved)
